EPICODE

CYBERSECURITY COURSE

BY MAX ALDROVANDI

17/05/2024
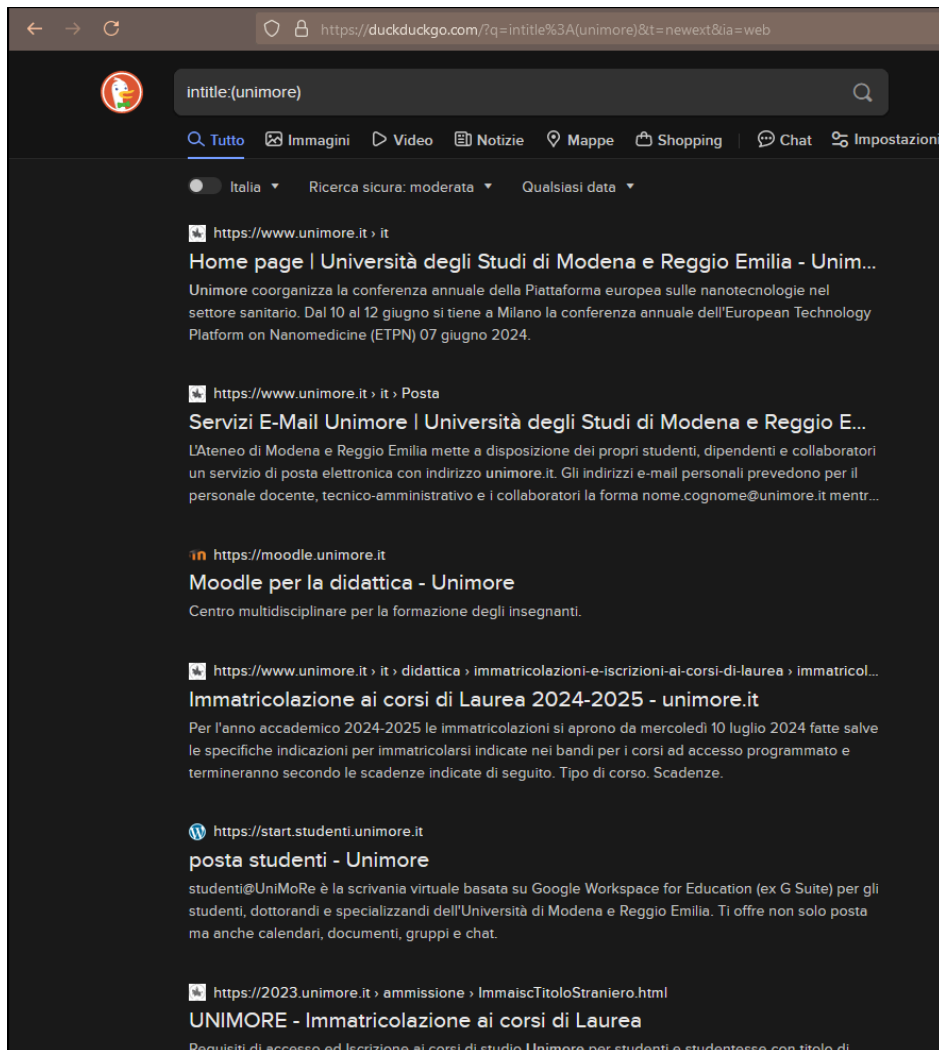

PRACTICE EXERCISE S5/L2

Track:

In today's exercise, the student will perform an information-gathering phase simulation using public data on a target of choice.

At the end of the analysis, the student should produce a small report where he/she will indicate for each tool used:

- The target audience.
- The queries used (where applicable).
- The results obtained.

Solution:

Process leaked file descriptors error on JENKINS

I am getting this error when I configured a job to do stop and start of tomcat server: Process **leaked file** descriptors. See http://wiki.jenkins-ci.org/display/JENKINS/Spawning+processes+from+build for more information.

ICPR2020 Paper Browser - ailb-web.ing.unimore.it

In this paper, we propose an improved malware image rescaling algorithm (IMIR) based on local mean algorithm. Its main goal of IMIR is to reduce the loss of information from samples during the process of converting binary **files** to image **files**.

Process leaked file descriptors error on JENKINS

http://stackoverflow.com/questions/17024441/ddg#220965...

Yes, creating fake `BUILD_ID` for process tells Jenkins to ignore this process during detection spawned processes, so this process will be not killed after finishing job.

Usage: Enter `BUILD_ID=dontKillMe` before your command, for example into `Execute` `shell` build step:

```
BUILD_ID=dontKillMe nohup ./yourStartScript.sh &
```

Note: See also nohup
